Collagen alpha 1(II) chain precursor [imported] - horse
NyAlternate names: type II collagen
NyAlternate names: type II collagen
CyBoteles: Squares caballus (domestic horse)
CyBoteles: 31-Jan-2000 #sequence_revision 31-Jan-2000 #text_change 04-Mar-2000
CyAccession: T45467
Ry Richardson, Dw., Dodgey, G.R.
Ry Richardson, Dw., Dodgey, G.R.
Submitted to the EMBL Data Library, June 1996
A, Description: Cloning of equine type II collagen and modulation of its expression in equal part of the EMBL Data Library, June 1996
A, Description: Cloning of equine type II collagen and modulation of its expression in equal part of the EMBL Data Library; translated from GB/EMBL/DDBJ

A,Note: the composition of peptides comprising residues 1-9 and 1-19 confirms the sequence A,Note: this region (residues 651-671 above) probably corresponds to positions 1032-1052 (Comment: Prolines and lyaines at the third position of the tripeptide repeating unit (ed and subsequently 0-glycosylated.
C,Comment: The order of the mine CNBr peptides in the alpha 1(1) chain of rat skin collaction of comment: The complete chain contains 1052 residues.
C,Superfamily: collagen alpha 1(1) chain; fibrillar collagen carboxyl-terminal homology; C,Reywords: blocked amino end; coiled coil; extracellular matrix; glycoprotein; hydroxyl) F;1/Modified site: allysine (Lys) #status experimental
F;103,424,547/Binding site: carbohydrate (Lys) (covalent) #status experimental
F;103/Modified site: 5-hydroxylysine (Lys) (spartial) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             040333

Collagen alpha 1(II) chain precursor - African clawed frog

C;Species: Xenopus laevis (African clawed frog)

C;Decies: Aenopus laevis (African clawed frog)

C;Decies: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 10-Sep-1999

C;Accession: B40333

A;Croment: Prolines and lysines at the third postition of the tripeptide repeating unit (are 5-hydroxylated and subsequently O-glycosylated.
C;Comment: The amino-terminal propeptide domain appears not to be completely cleaved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1,

-!- FUNCTION: Type I collagen

-!- FUNCTION: Type I collagen).

-!- SUBJMIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium hydroxyapatite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovoidea; Bovidae; Bovinae; Bos.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  397
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            457
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  55
-i- PTM: Proline residues at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. Pro-726 is the only 3-hydroxypro and the only hydroxylated proline in position X.
-i- PTM: O-linked glycan consists of a Glc-Gal disaccharide bound to the oxygen atom of a post-translationally added hydroxyl group.
-i- MISCELLANEOUS: The complete chain contains 1052 residues.

Nucleic Acids Res. 11:2733-2744(1983).

-!- FUNCTION: Collagen type III occurs in most soft connective tissues along with type I collagen.

-!- SUBBNIT: Trimers of identical alpha 1(III) chains. The chains are linked to each other by interchain disulfide bonds. Trimers are also cross-linked via hydroxylysines.

-!- FUNT Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
                                                                                                                                                  Gallus gallus (Chicken).

"The order of the CNBr peptides from the alpha 2 chain of collagen.";

Blochem. Biophys. Res. Commun. 38:703-708(1970).

-i. FUNCTION: Type I collagen is a member of group I collagen

(fibrillar forming collagen).

-i. SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

-i. TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              181 GSPGSPGPDGKTGPPGPAGEDGRPGPPGPPGARGEAGVMGFPGPKGAAGEPGKAGERGVP

1(III)CB9B (positions 928-1028).";
Hoppe-Seyler's Z. Physiol. Chem. 360.861-868(1979).
1-PUNCTION: Collagen type III occurs in most soft connective tissues along with type I collagen.
1 Innead to each other by interchain disulfide bonds. Trimers are also cross-linked to his hydroxylysines.
1 PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylysines, and the chains.

Production of extracellular matrix proteins containing 4-trans-hydroxyproline results in native self aggregating proteins, useful on medical implants.

Disclosure; Fig 27A-E; 260pp; English.

The specification describes a method for producing an extracellular matrix protein or its fragment. The extracellular matrix protein is expable of self aggregating in a cell which does not ordinarily hydroxylated prolines. The method comprises optimising a nucleic acid sequence for expression in the cell by substitution of codons preferred by that cell for naturally occurring codons not preferred by the cell; incorporating the nucleic acid sequence into the cell; and contacting the corporating the nucleic acid sequence into the cell; and contacting the selected from the group consisting of trans-4-hydroxyproline and ocid, selected from the group consisting of trans-4-hydroxyproline and selected into the extracellular matrix protein. The

ô
method may be used to make host cells assimilate and incorporate trans-4-
nydroxyproline into proteins. This is especially useful in the
recombinant production of proteins such as colladen, fibrinogen and
fibronectin whose ability to self aggregate and produce functional
proteins depends on the post translational hydroxylation of proline. The
method is also useful in studying the structure and function of
polypeptides which do not normally contain trans-4-hydroxyproline. The
present sequence represents a human collagen I (alphal) protein, which
may be produced using the method of the invention
                                                                                                                                                                                                                                                                            260

The specification describes a method for producing an extracellular matrix protein or its fragment. The extracellular matrix protein is capable of self aggregating in a cell which does not ordinarily hydroxylated prolines. The method comprises optimising a nucleic acid sequence for expression in the cell by substitution of codons preferred by that cell for naturally occurring codons not preferred by the cell; incorporating the nucleic acid sequence into the cell; and contacting the cell with a hypertonic growth medium containing at least one amino acid, selected from the group consisting of trans-4-hydroxyproline and 3-hydroxyproline and incorporated into the extracellular matrix protein. The method may be used to make host cells assimilate and incorporate trans-4-hydroxyproline into proteins. This is especially useful in the recombinant production of proteins such as collagen, fibrinogen and production of proteins such as collagen, fibrinogen and proteins depends on the post translational hydroxylation of proline. The method is also useful in studying the structure and function of proteins represents when a contain trans-4-hydroxyprolline. The processing the properties and production of proteins contain trans-4-hydroxyprolline. The processing contain trans-4-hydroxyprolline in the processing trans-4-hydroxyprocesine in the processing trans-4-hydroxyprocessing trans-4-hydr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
